Projects

School Management System, Student Management

2022/03 - 2022/08

This project is a website built using the MERN stack, which is designed to assist school managers in managing their school's records. It includes features such as student data management, staff management, results tracking, and financial management. Some additional features are currently in development. The website is intended to provide a comprehensive solution for managing a school's operations and data.

Recordary, Student Data Management

2022/02 - 2022/05

Recordary is a Python software for student data tracking, offering a reliable and user-friendly solution for monitoring student progress and performance. It allows for data collection, storage and analysis in a centralized location for informed decision making.
